FFAC IWG Purpose & Vision Statement:

“The IWG is focused on supporting landscape-scale, active restoration of federal forest lands by identifying and removing barriers to restoration of forest and watershed health.

We will:

1. help collaboratives identify local forest health priorities, develop landscape-scale forest restoration plans, and find agreement for active management;
2. advocate for sustainable and predictable supply of biomass and merchantable timber, and
3. advocate for supportive state and federal policy.

These activities will restore forests, help sustain communities by creating jobs and maintaining forest-sector infrastructure, and enhance Oregon's energy independence. The IWG will initially focus on the dry, fire-prone forests found east of the Cascades and in the southern interior of Oregon."

The FFAC IWG adopted an “action plan framework” at the 3/31/11 work session. The framework identifies 6 broad categories for organizing and prioritizing possible tasks to address barriers identified by collaboratives, Federal agencies (*supply side-related*) and businesses needing biomass and merchantable material (*demand side-related*). These categories are A-F below and are presented in no particular order.

- A. Develop a Landscape Assessment Tool Kit
- B. Create a System to Facilitate and Reduce the Cost and Time for NEPA Analysis and ESA Consultation
- C. Provide Project Staffing Support to Federal Agencies
- D. Provide Support for Engaging with Local Collaboratives
- E. Identify Funding Sources
- F. Create a Subcommittee for Policy Issues
