

Examples of Collaborative Processes and Documents

Forest collaboratives in Oregon have a variety of processes for organizing and undertaking their work. These documents provide examples of how some collaboratives have approached a key need, project, or issue.

Operational/planning materials

Groups typically develop policies and procedures to guide their work. Collective development of such materials can assist a group in identifying its vision and how it wants to function. These may include mission statements, operational or administrative procedures, statements of cooperation or commitment, and ground rules. They may also create strategic plans or work plans to structure their work for a future period of time.
